

**AMENDMENTS TO THE SPECIFICATION:**

*Please add the following paragraph before the section entitled "BRIEF DESCRIPTION OF THE DRAWINGS":*

"A method for accessing web pages on a network is disclosed. The network is coupled to a server computer and a user computer operated by a user. The user computer includes a user input device and a display device. The method comprises transferring a portion of a web page from the server computer to the display device over the network. The portion of the web page includes a selector allowing the user to concurrently select respective values for two or more dimensions. A user's choice is detected by receiving information generated in response to signals from the user input device to indicate the value selected for each dimension chosen by the user. A user's choice is detected by receiving information generated in response to signals from the user input device to indicate a filtering methodology selected by the user for each dimension chosen by the user. The filtering methodology is selected by the user from a plurality of filtering methodologies. One or more web pages associated with information that meets all the respective values for the chosen dimensions are identified in accordance with the corresponding filtering methodologies selected for the chosen dimensions. Information about the identified web pages is sent to the user computer. At least one of the identified web pages includes a plurality of sections. A user's choice is then detected by receiving information generated in response to signals from the user input device indicating a web page selected by the user from the identified web pages. Only sections of the web page selected by the user that meet the respective values for the chosen dimensions and the corresponding filtering methodologies are sent to the user computer. Signals provided by a document creator are accepted via the user input device to create a document, the document having a plurality of sections. Signals provided by the document creator are accepted via the user input

device to assign a value for at least one dimension to each section of the document. A first section of the document and a second section of the document are associated with different values for the same dimension. The user is given access to the plurality of sections of the document based on the values assigned to the corresponding dimensions by the document creator.”

*Please replace the ABSTRACT OF THE DISCLOSURE at page 22 with the following paragraph:*

“A method for accessing web pages on a network is disclosed. The method comprises transferring a portion of a web page from a server computer to a display device over the network. The portion of the web page includes a selector allowing the user to concurrently select respective values for two or more dimensions. A user’s choice is detected to indicate the value selected for each dimension chosen by the user and a filtering methodology selected by the user for each dimension chosen by the user. The filtering methodology is selected from a plurality of filtering methodologies. One or more web pages associated with information that meets all the respective values for the chosen dimensions are identified in accordance with the corresponding filtering methodologies selected for the chosen dimensions. Information about the identified web pages is sent to the user computer. At least one of the identified web pages includes a plurality of sections. A user’s choice is then detected indicating a web page selected by the user from the identified web pages. Only sections of the web page selected by the user that meet the respective values for the chosen dimensions and the corresponding filtering methodologies are sent to the user computer. Signals provided by a document creator are accepted via the user input device to create a document, the document having a plurality of sections. Signals provided by the document creator are accepted via the user input device to assign a value for at least one dimension to each section of the

document. A first section of the document and a second section of the document are associated with different values for the same dimension. The user is given access to the plurality of sections of the document based on the values assigned to the corresponding dimensions by the document creator.”

*Please replace lines 8-10 on page 7 in the section entitled “BRIEF DESCRIPTION OF THE DRAWINGS” with the following:*

“Fig. 2F shows a text search box used in conjunction with a slice selector tool; and

Fig. 3 illustrates a data model of the preferred embodiment [[.]];

Fig. 4 illustrates the publishing aspect of one preferred embodiment; and

Fig. 5 illustrates a document with multiple sections having different dimension values.”

*Please add the following to the end of the first full paragraph (lines 3-14) on page 12:*

“Fig. 4 illustrates a user interface that may be used to publish a document according to one preferred embodiment.”

*Please add the following to the end of line 4 on page 13:*

“Fig. 5 illustrates a document with multiple sections having different dimension values.”
